1 OVERVIEW OF THE CRR
DISCLOSURE REQUIREMENTS

1 Overview of the CRR disclosure requirements

The amounts are presented in million euros. Rounding differences can occur.

The following overview lists the disclosure requirements pursuant to CRR and the corresponding chapters in Münchener Hypothekenbank's disclosure report.

TABLE 6: EU LIQB: QUALITATIVE INFORMATION ON LCR THAT COMPLEMENTS TEMPLATE EU LIQ1

Qualitative information - Free format

Explanations on the main drivers of LCR results and the evolution of the contribution of inputs to the LCR's calculation over time	The main drivers of the LCR are the current central bank balance (HQLA), forward funding (inflows) and maturing mortgage covered bonds (outflows).				
Explanations on the changes in the LCR over time	The LCR was consistently above 135% over the last 12 months. Interim increases were mainly caused by the factors listed in (a), which are, as a matter of course, very volatile.				
Explanations on the actual concentration of funding sources	As a Pfandbriefbank, the concentration of funding sources is primarily on mortgage covered bonds.				
High-level description of the composition of the institution's liquidity buffer.	The liquidity buffer contains predominantly level 1a assets, i.e. central and regional government assets.				
Derivative exposures and potential collateral calls	The potential collateral calls remain at a constant level.				
Currency mismatch in the LCR	Both the liquidity buffer and the outflows consist mostly of EUR positions.				
Other items in the LCR calculation that are not captured in the LCR disclosure template but that the institution considers relevant for its liquidity profile	The LCR of Münchener Hypothekenbank eG is very volatile. This is caused by the deterministic cash flow profile of the institution (which can be forecasted very precisely) rather than by unexpected changes in any LCR component.
